

# GENERAL INTERFACE CONTROL CIRCUIT

## Abstract

An general interface control circuit for outputting or inputting a predetermined number of data includes at least a control table for providing a predetermined sequence, a predetermined number of I/O pins, and predetermined cycles for outputting/inputting the predetermined number of data. The interface control circuit further includes a timing control unit electrically connected to the control table for outputting/inputting the predetermined number of data through the predetermined number of I/O pins during the predetermined cycles.
